Michael Hawkins

michael.hawkins@protonmail.com | +44 (0)779 308 1223

PERSONAL STATEMENT

Technical Leader with extensive experience architecting and delivering scalable software systems across diverse platforms and technologies. Recognized for driving technical strategy, making critical architectural decisions, and establishing engineering best practices that elevate team performance and system quality. Deep expertise in modern programming languages including Rust, JavaScript, and SQL, with a proven track record of designing and implementing maintainable enterprise solutions that balance technical excellence with business objectives. Skilled in technical mentorship, setting engineering standards, and influencing cross-functional teams through technical leadership rather than authority. Known for championing innovation, fostering engineering culture, and delivering solutions that drive measurable business impact while maintaining high technical standards.

SKILLS

Programming Languages & Tools

- Vue, React
- TypeScript, JavaScript, HTML, CSS
- Node, Rust, C++, Python
- Bash, PowerShell scripting
- REST & SOAP APIs
- LaTeX, Markdown

Model-Based Engineering & Architecture

- Model-Based Systems Engineering (MBSE)
- Model-Driven Engineering (MDE)
- Systems Modeling (SysML, UML)
- Requirements Engineering & Traceability
- Low-Code/No-Code Platform Architecture
- Systems Integration & API Design

Technical Leadership & Methodologies

- Team Leadership & Mentoring
- Agile, Lean, and Kanban Project Management
- Stakeholder Management & Communication
- Change Management & Process Improvement
- Training & Knowledge Sharing

Software Design & Patterns

- Software Architecture & Design
- Design Patterns
- Distributed Systems
- Microservices
- Security Best Practices
- Systems Integration Patterns

Supporting Technologies

- Version Control (git)
- Workflow Automation
- SDLC Design & Implementation
- Documentation
- Knowledge Management
- Testing & Quality Assurance

CAREER HIGHLIGHTS

AI Product Development

The goal was to develop an AI product to bridge business process modeling and low-code software modeling tools, using AI to identify entities and form data models.
The product required architectural decisions for model translation and system integration between the AI service and low-code platform.
As technical subject matter expert and architectural contributor on a cross-departmental team, I designed the technical architecture for model translations, leveraging MBSE principles.
Successfully launched product on track to become a major revenue stream, with architectural patterns serving as foundation for future AI integrations.

Rent Data Analytics Platform Productization

A customer software project was identified as a product candidate requiring full productization with proper engineering infrastructure.
Transition the platform from project to product with dedicated development team, CI/CD infrastructure, engineering processes, and scalable architecture.
I architected the technical foundation and led productization, building the development team from the ground up, establishing CI/CD pipelines, defining engineering standards, and implementing scalable system architectures.
Successfully productized the platform with engineering processes adopted as organizational templates by other product teams.

Software Upgrade Program Technical Strategy

Adobe announced Flash retirement in 2021, requiring migration of Flash-based components across approximately 300 customer deployments.
Upgrade 300 customers in an 18-month period with no deadline extension, necessitating technical strategy for scalable upgrade processes and automation.
I architected technical strategies for upgrade automation, designed scalable deployment patterns, and established engineering processes enabling efficient resource planning across concurrent upgrades.
Achieved 97% completion rate (292 of 300 customers) by deadline, with technical frameworks enabling efficient execution at scale.

Prototype Contactless Bitcoin Lightning Payments

For the second Boltathon (Lightning Hackathon), I identified a UX gap where Bitcoin Lightning wallets lacked contactless payment capabilities available in traditional mobile payment systems.
Design and implement an NFC-based contactless payment solution for Bitcoin Lightning networks, requiring integration between hardware terminal and mobile wallet software.
Over 48 hours, I architected and implemented a full-stack solution: designed a payment requester terminal using Raspberry Pi with RC532 NFC breakout board, and extended the open-source zap-android wallet with NFC functionality.
Delivered working prototype demonstrating contactless Bitcoin Lightning payments, with NFC enhancement refined and merged into main zap-android project.

Technical Account Manager Role Establishment

The business needed to establish technical leadership and governance frameworks for key enterprise customers to improve issue resolution and project delivery.
Design and implement a Technical Account Manager role providing technical leadership, engineering standards, and technical decision-making for critical accounts.
As part of a six-person technical team across three continents, I architected the technical governance framework, defined engineering practices and standards, and established technical leadership processes.
Successfully rolled out the role to seven key accounts in EMEA over six months, reducing technical issue backlog by 41% (from 64 to 38) and improving project delivery outcomes.

PROFESSIONAL TRAINING

A lifelong learner committed to continuous professional development through targeted online education and industry training. Regularly pursuing courses that enhance technical skills and leadership capabilities to stay at the forefront of industry trends and best practices. This commitment to ongoing education has been instrumental in maintaining cutting-edge expertise in emerging technologies and methodologies, directly contributing to successful project outcomes and effective team leadership.

EXPERIENCE

Senior Software Developer

Netcall | Jun 2021 - Present

- Led productization of rent data analytics platform, building development team from ground up, establishing infrastructure and CI/CD pipelines, and implementing engineering processes and best practices
- Contributed to architecture and development of AI-powered product bridging business process modeling and low-code platforms as part of cross-departmental team, serving as technical subject matter expert and driving architectural decisions for model translations
- Established engineering standards and best practices for product development teams, creating CI/CD pipelines and development processes adopted as organizational templates
- Architected and implemented scalable full-stack system architectures including web applications (TypeScript, JavaScript, Vue.js), database solutions, and integration patterns (REST, SOAP APIs), optimizing for performance, maintainability, and enterprise-scale requirements
- Provided technical leadership and mentorship to cross-functional teams, influencing technical direction and establishing design patterns for low-code platform development

Technical Consulting Team Lead

Advanced | Jan 2015 - June 2021

- Led technical strategy and architecture decisions for enterprise software solutions across multiple clients, mentoring team of 6 consultants and establishing technical standards
- Architected and delivered complex integration solutions using SOAP and REST web services, designing scalable patterns for enterprise system connectivity
- Established engineering practices and automated CI/CD pipelines that improved delivery velocity and code quality across client engagements
- Designed and optimized database architectures for MariaDB and MySQL-based solutions, implementing performance tuning strategies for high-traffic applications
- Led technical transformation initiatives, migrating documentation platforms to LaTeX-based workflows that reduced rebranding overhead by 95% and enabled multi-format publishing
- Provided deep technical expertise in root cause analysis and system troubleshooting, resolving critical production issues and establishing incident response patterns

Technical Account Manager

eGain Communications | Jun 2013 - Jan 2015

- Provided technical leadership and strategic guidance for key enterprise accounts, aligning technical solutions with business objectives and driving technical decision-making
- Led cross-departmental technical teams in incident resolution and system optimization for cloud-based CRM solutions, establishing technical governance frameworks
- Architected technical strategies for MySQL and Oracle-based software solutions, designing scalable architectures to meet enterprise SLA requirements
- Established technical standards and best practices for professional services delivery, influencing engineering practices across multiple client engagements

Professional Services Consultant

Pitney Bowes Software | Apr 2008 - Jun 2013

- Architected and designed enterprise software solutions for clients, establishing design patterns and best practices that became organizational standards
- Led agile transformation initiatives, establishing engineering methodologies and development practices that improved team productivity and delivery quality
- Designed and optimized relational database architectures for enterprise-scale applications, implementing performance optimization strategies
- Developed custom software solutions using domain-specific languages, creating reusable frameworks and architectural patterns
- Led technical design and implementation of end-to-end solutions throughout SDLC, mentoring development teams and establishing technical standards
